Making Nutrition Information Accessible

Clear information. Better choices. Healthier lives.

Accessible design helps everyone understand nutrition information. Clear words, useful images, and organized layouts make information easier to use.

Design for Neurodiverse Learners

Keep information simple, predictable, and easy to follow.

Do

-Use Plain English.
-Short paragraphs.
-Consistent headings.

AVOID

-Complex words and jargon.
-Crowded pages.
-Too many decorative elements.

Use Links and Tables Correctly

Help readers find information quickly.

DO

-Use descriptive hyperlinks.
-Add clear table headings.
-Keep the reading order logical.

AVOID

-URLs as only link description.
-Unlabeled tabels
- Unorganized information

Support Screen Reader Users

Organize content so assistive technology can navigate it.

DO

-Use tagged headings.
-Use real bulleted lists.
-Add alt-text to meaningful images

AVOID

-Skipping heading levels.
-Using “click here.”
-Leaving images undescribed.

Use Images and Alt-Text

Images should support the message and have descriptions.

DO

- Use meaningful food images.
- Describe important images.
- Mark decorative images as decorative.

AVOID

- Using images without descriptions.
- Relying on pictures alone to explain a concept.

Make It Work for Low Vision

Make text easy to see and read.

DO

-Use dark text on light backgrounds.
-Use readable font size.
-Keep layouts uncluttered.

AVOID

-Tiny text.
-Low-contrast colors.
-Using color alone to explain meaning.

Check Accessibility Before Sharing

Make sure the final document works beyond its visual appearance.

DO

- Export a tagged PDF.
- Test links and reading order.
- Check the PDF with accessibility tools.

AVOID

- Assuming appearance guarantees accessibility.
- Sharing without checking the exported PDF.

KEY TAKEAWAYS

✓ Use plain language
✓ Support different learning styles
✓ Keep layouts clear and consistent
✓ Make information accessible to everyone
